

Appendix 2

Appendix 2 allows us to make a comparison of Burnley's performance against other areas in the number of active enterprises by counting the number of active enterprises per 10,000 of the population.

This method can be taken as a measure of entrepreneurial activity within an area.

For example: Despite having the larger population, Burnley does not have as many active enterprises as the Ribble Valley. Graph A allows us to see that there are more active enterprises per 10,000 heads of the population in the Ribble Valley than there are in any other Pennine Lancashire borough. This suggests that the Ribble Valley has a higher rate of entrepreneurial activity.
